DROP COMMANDS FOR
DATABASE PROGRAMMING WITH PL/SQL PRACTICES

The practice exercises create many extra database objects, most of which are not needed in later sections. The following table lists most of these extra objects and where they are created and used. Every schema object uses disk space (a finite resource) on the database server.

To avoid the possibility of receiving an insufficient space message please have all students clean up their schemas from time to time by dropping objects which are not needed later in the course.

Students should do this by entering and executing the "DROP …. ;" commands shown in the "Drop Command" column after every 3-4 sections of the course.
